

Simplify Security Stay Productive

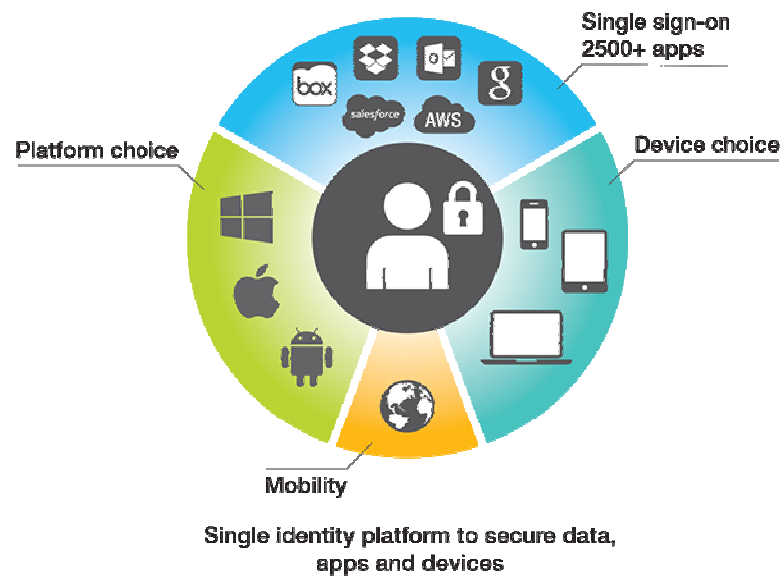

Stone Forest IT

Protect data and empower workers

Unsecured company data can cost millions in lost research, regulatory fines, or litigation settlements, but protecting your information should not make it harder for workers to get their jobs done.

Stone Forest IT (SFIT) helps you to reduce security risks and enable workers to be more productive with features such as:

- Identity and access management
- Information protection
- Device and application management
- Cyber intrusion detection

Enterprise security needs

SFIT will help you to...

Control access to confidential data

Implement multi-factor authentication (MFA) to help prevent unauthorised access. **Secure information** across file servers, email, and collaboration platforms with **document tracking and encryption**.

Lock down devices to improve efficiency of remote workers

Enforce security policies on corporate-owned or personal devices to prevent data theft, even if devices are lost or stolen.

Avoid regulatory fines

Centrally manage and secure devices so that they comply with industry and government regulations for information security. **Quickly provision and deprovision identities and access** for new, temporary, or exiting employees.

Prevent negative brand exposure and litigation costs

Identify cyber attacks before data is compromised **using behaviour-based analytics** that leverage Machine Learning to inspect all network traffic.

Provide all workers with simple, secure access to 2,500+ apps

Enable single sign-on (SSO) so workers only need one password or biometric/PIN combination to access all the applications they need.

Our Mobility Management Services are right for your business

Secure, flexible access to company resources

- Single sign-on to any application on your favourite device
- Corporate policy enforcement for accessing resources from corporate or personal devices
- Managed access to more than 2,500 pre-integrated SaaS applications, as well as your own custom cloud or on-premises hosted web applications

Layered protection against data theft

- Trusted multi-factor authentication engine that processes billions of requests every week
- Data encryption that follows documents everywhere
- Behavioural analytics to pinpoint cyber attacks before information can be compromised

Low licensing and implementation costs

- Comprehensive security coverage for nearly half the price of third-party solutions
- Self-service password reset can reduce Help Desk calls by an average of 25%
- Simple set-up, always up to date, and connects to your on-premises data centre
