

## WHAT ARE IT HEALTH CHECKS?

The objective of IT Health Checks is to assess whether your current IT system (network infrastructure, software licensing, hardware specifications etc.) and network can support current and future business needs. We highlight any gaps and offer advice to help you focus on areas that are more vulnerable to failure and require more attention.

Periodic IT Health Checks also ensure effective implementation of security features. The process will identify any vulnerability in IT systems and networks that may compromise legal compliance, data confidentiality, integrity and availability of information in the system or network.

### When Do You Need An IT Health Check?

- Confidentiality** Are your emails and/or clients' data protected?
- Compliance** Are you in legal compliance with your software licences?
- Continuity** Are you bothered about poor performance of your current IT vendor and do not know how to transit without compromising your current IT needs?
- Scalability** Is your current IT set-up able to support more users as your business grows?

### Our Team Will Help You To:

- Current IT Resource** Assess status of your PCs and servers, internet, security, training, legal compliance and data backups.
- Future Growth & Change** Understand how your business growth or change will impact your IT infrastructure and system, so that IT plans and investments can be made accordingly.
- Confidential Information** Outline the level of exposure to potential security breaches, data loss or system downtime.

The IT Health Check process culminates in a summary report detailing any vulnerability with the recommended counter measure.

Stone Forest IT (SFIT) is the IT services arm of the Stone Forest group, while its CPA Practice, RSM in Singapore, is a member of RSM International, the world's 7th largest accounting and consulting network with a global reach of over 740 offices in 120 countries.
